

# Copper Exhaust Gasket

Code: RGS1120

## Description

We manufactured the exhaust copper gaskets from thick, pliable copper with a raised compression ring to maintain improved sealing. This is your answer to leaking exhaust flange on just about any set of stock or custom cylinder heads. Copper exhaust gaskets are must when running fuel injection or a turbo.

All copper exhaust gaskets have a crush-ring to help ensure a tight fit.

Item no.: RGS1120

## Copper Exhaust Gasket

Item no.: RGS1120

- \* Single use seal on ultra high vacuum flanges
  - \* Copper solid gaskets fit between the same size UHV/CF flanges to make a impermeable seal
  - \* Copper is relatively soft, the steel knife edges of the flanges bite down on the copper as the flanges are tightened toward each other.
-
